PROFESSIONAL SUMMARY

Detail-oriented and creative **Computer Science graduate** with hands-on experience in **data engineering**, **full-stack development**, and **business intelligence tools**. Adept at designing scalable solutions using Python, Azure, Databricks, and modern web frameworks. Proven ability to **build end-to-end systems**, **automate workflows**, and **visualize insights** that drive business outcomes.

TECHNICAL SKILLS

Languages & Frameworks: Python, SQL, JavaScript, HTML/CSS, React, Flask, Tkinter

Cloud & Data Engineering: Azure (Data Factory, Data Lake Gen2, Databricks), GitHub Pages, GitHub Actions

Data Analysis & BI: Power BI, Tableau, Excel (PivotTables, VLOOKUP), Pandas, NumPy, KPI Dashboards

Tools & APIs: VS Code, GitHub, Jupyter Notebook, ArcGIS, Stripe API, Tesseract OCR, REST API Integration

UI/UX & Documentation: Responsive Web Design, Prototyping (Figma/HTML), SOP & User Guide Creation

Enterprise Systems & Support: ServiceNow, Active Directory, Office 365, Microsoft Teams (bot integration)

Automation & Workflow Tools: Power Platform (Automate, Forms), PowerShell Scripting, Jira, Agile/SCRUM, UAT Coordination

EDUCATION

Bachelor of Science, Computer Science

Thompson Rivers University – Kamloops, BC

PROFESSIONAL EXPERIENCE

Business Technology Co-op

British Columbia Lottery Corporation (BCLC), Kamloops, BC

May 2023 – Dec 2023

- Designed and automated HR workflows using PowerShell and Power Platform, reducing manual processing time by ~25% weekly.
 - Developed Microsoft Teams bots for vacation approvals and attendance check-ins, streamlining admin workflows and cutting back-and-forth communication by 50%.
 - Migrated legacy department data to cloud storage, leading efforts in tagging, metadata validation, and ownership mapping.
 - Resolved 100+ technical support tickets via ServiceNow; introduced automation scripts that reduced resolution times significantly.
 - Authored SOPs, how-to guides, and UAT documentation adopted across multiple teams to standardize processes.
 - Built Excel dashboards to visualize service ticket trends and support operational reporting for the IT service desk.
 - Led BCLC's Co-op Club (15+ members), coordinating weekly peer-led workshops on automation tools and soft skills development.
-

TECHNICAL PROJECTS

Paris Olympics 2024 – End-to-End Data Pipeline: Azure Data Factory | Databricks | Synapse | Power BI

- Built ETL pipeline to process 200+ Olympic records and output clean, queryable datasets
- Created Power BI dashboards showing medal counts by country, year, event

Runway Inspection with Geospatial Mapping: Python | OpenCV | ArcGIS | GPS Telemetry

- Developed computer vision tool to detect anomalies with 92% accuracy
- Used ArcGIS and telemetry data to convert detections into precise GPS locations

Airline Reviews Dashboard: Python | SQL | Tableau

- Processed and analyzed 50,000+ airline reviews from Kaggle
- Built dashboard visualizing sentiment trends by country, cabin class, and date

SereneSignal Desktop App: Python | Tkinter

- Visual focus timer app designed for sensory-sensitive users (no sound alerts)
- Packaged into a downloadable .exe and used custom border animation
